

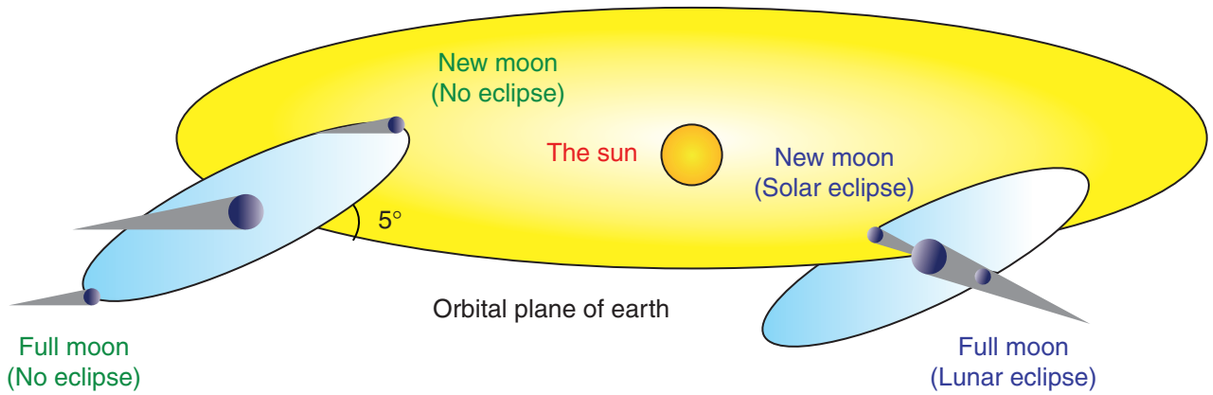

Figure 6.35 Orbital tilt of the Moon

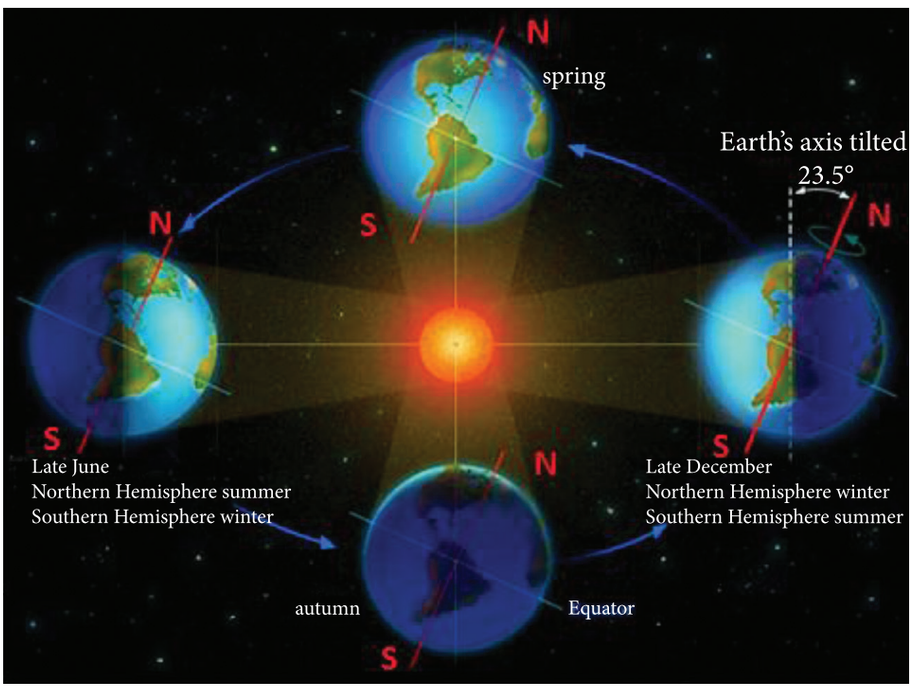

Figure 6.36 Seasons on Earth

Note

Pole star is a star located exactly above the Earth's axis of rotation, hence it appears to be stationary. The Star Polaris is our pole star.

4. Star's apparent motion and spinning of the Earth

The Earth's spinning motion can be proved by observing star's position over a night. Due to Earth's spinning motion, the stars in sky appear to move in circular motion about the pole star as shown in Figure 6.37

Point to ponder

Using Sun rays and shadows, How will you prove that the Earth's tilt is 23.5° ?
