into the alveolar air.

c. Oxygen and carbon dioxide diffuse down their concentration gradients between blood and alveolar air.

d. Oxygen diffuses from alveolar air into deoxygenated blood.

17. Name the respiratory organs of flatworm, earthworm, fish, prawn, cockroach and cat.
18. Name the enzyme that catalyses the bicarbonate formation in RBCs.
19. Air moving from the nose to the trachea passes through a number of structures. List in order of the structures.
20. Which structure seals the larynx when we swallow?
21. Resistance in the airways is typically low. Why? Give two reasons.
22. How the body makes long–term adjustments when living in high altitude.
23. Why is pneumonia considered a dangerous disease?
24. Diffusion of gases occurs in the alveolar region only and not in any other part of the respiratory system. Discuss.
25. Sketch a flow chart to show the path way of air flow during respiration.
26. Explain the conditions which creates problems in oxygen transport.
