9.2.4 Infinite limits and limits at infinity

Infinite Limits

Let $f:\mathbb{R}\setminus\{0\}\to\mathbb{R}$ be defined by $f(x)=\dfrac{1}{x^2}$.

Let us consider the problem of calculating $\lim_{x\to 0}\dfrac{1}{x^2}$.

The following table gives the values of $\dfrac{1}{x^2}$ near 0.

$x\to 0^+$			$x\to 0^-$		
x	x^2	$\frac{1}{x^2}$	x	x^2	$\frac{1}{x^2}$
1	1	1	-1	1	1
0.5	0.25	4	-0.5	0.25	4
0.1	0.01	100	-0.1	0.01	100
0.01	0.0001	10,000	$-.01$	0.0001	10,000
0.001	0.000001	10,00,000	-0.001	0.000001	10,00,000
0.0001	0.00000001	10,00,00,000	-0.0001	0.00000001	10,00,00,000

The table values tell us that as x gets closer and closer to 0, $f(x)=\dfrac{1}{x^2}$ gets larger and larger. In fact, $\dfrac{1}{x^2}$ grows without bound as x approaches 0 from either side. In this situation we say that $f(x)$ **tends to infinity as x approaches zero** and write $\dfrac{1}{x^2}\to\infty$ as $x\to 0^-$ and $\dfrac{1}{x^2}\to\infty$ as $x\to 0^+$

and hence $\dfrac{1}{x^2}\to\infty$ as $x\to 0$.
