

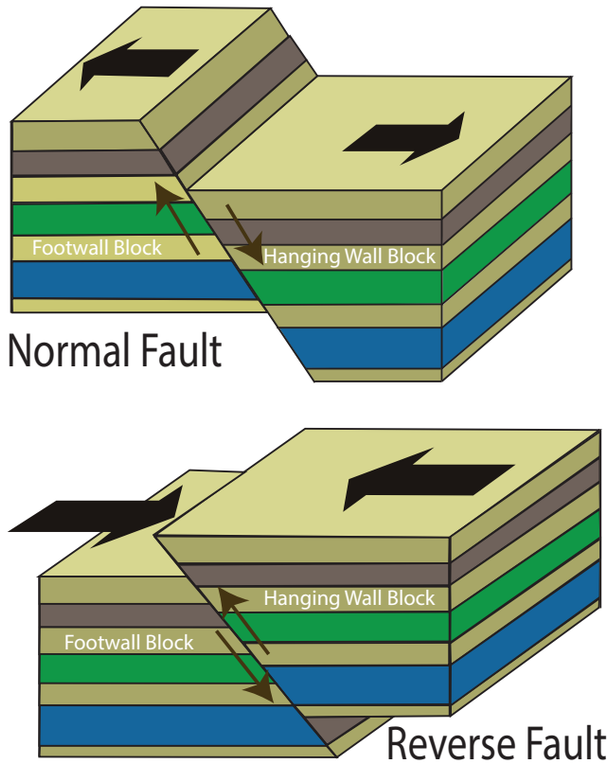

Figure 3.17 Normal fault and Reverse fault

When movement occurs along a normal fault, the hanging wall slips downward.

Landforms made by Normal fault are:

1. Rift Valley or Graben

When a narrow block of land drops or subsides between two parallel normal faults, rift valley (Graben) is formed. Graben originates from the German word meaning 'trough'. A Rift Valley may subsequently get filled by water and a river may flow through it. Normally, a rift valley is long, narrow and very deep. For example,

Figure 3.18 Narmada Rift Valley, India

i. Rhine rift Valley is flanked by two Block Mountains namely the Vosges and the Black Forest.

ii. The rift of River Narmada in India lies between the Vindhyas and Satpura block mountains.

iii. The great rift valley of Africa.

The Great Rift Valley of Africa is the longest rift valley in the world. It stretches for 6,400 km from Mozambique in the south to Syria in the north. The depressions have become lakes. The lakes
