Contours are imaginary lines connecting places having same elevation above mean sea level. They are drawn in brown colour.

Form lines are like contours representing features that are not actually surveyed. They are shown by broken lines.

Spot heights are heights of places surveyed and they denote the actual height above mean sea level. They are shown in maps as dots with their respective values written beside it.

Bench marks represent the actual height of a tall structure like a tall building, pillar, bridges or any other object of permanent nature. They are marked with the letters BM with the respective height.

Trigonometrical Stations are points included in the triangulation survey and
