

Weather Maps

Chapter Outline

12.1 Introduction

12.2 Instruments for Measuring Weather Elements

12.3 Advancement in Measuring Weather Elements

12.4 Weather Symbols

12.5 Station Model

12.6 Reading Weather Map

12.7 Weather Map Interpretation

12.8 Weather Forecasting

12.9 Tracking of Cyclones

Learning Objectives:

- *Aware of weather instruments*
- *Identify weather symbols*
- *Ability to draw a station model*
- *Interpretation of weather map*
- *Enhance the knowledge about weather forecasting and cyclone tracking.*

12.1 Introduction

A weather map is a map of the world or part of it showing at a stated time, the weather conditions like temperature, pressure, direction and velocity of the wind, humidity, clouds, visibility, nature and amount of precipitation with the help of symbols. The trained observers in observatories or in meteorological station note the temperature, pressure, directions and strength of the wind, the amount of cloud and precipitation. These observations are entered on a weather map with symbols. Thus, weather map portrays the weather elements marked with recorded symbols for a region at a particular time. It reveals the prevailing weather condition.

12.2 Instruments for Measuring Weather Elements

Weather varies with the changes in weather elements such as temperature, pressure, wind, humidity, cloudiness, precipitation, sunshine and visibility. The weather is measured employing particular instruments and recorded in weather stations. The weather elements are listed below.
