Weather Map Interpretation – Monsoon Season (Example 2)

The given weather map shows the weather condition on Tuesday 5th November 1991 at 08.30 Hrs IST 0300 Hrs GMT.

Distribution of Pressure Condition

1. **Low Pressure**: Low pressure areas exist over Northern and Southern Bay of Bengal and Lakshadweep (1012mb).
2. **High Pressure**: Central part of India, the plateau region is marked with High pressure. High pressure also prevails over Gujarat and Rajasthan. The other two high pressure areas are located in Afghanistan (1014mb), to the East of India. The pressure gradient is gentle throughout India.
3. **Wind Condition:** Calm weather prevails in north western coast of Orissa. Winds are northern in Tamilnadu, Southernly in Gujarat. In Central India, it is from the northeast.
4. **Sky Cover**: Sky cover is almost clear in North. In the South, it is partially cloudy. Sea condition is moderate. Haze is found near north eastern part of India.
5. **Precipitation**: Rain or thundershowers have occurred at a few places in coastal Andhra Pradesh, Tamil Nadu and South Interior Karnataka at one or two places in Telangana, Rayalasaema and Kerala.
6. **Departure of Maximum and Minimum temperature from Normal:** South west states record above normal temperature, eastern states have below normal temperature, except of the northwestern part of Rajasthan.

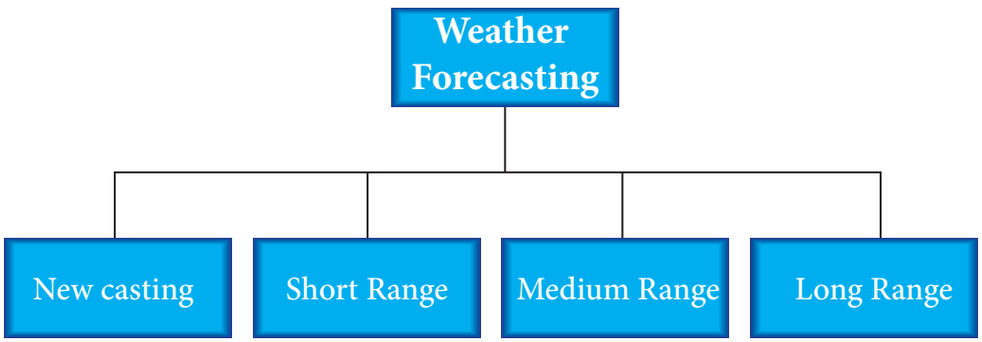

Conclusion: Low pressure prevails in sea and High pressure inland, so it indicates north east monsoon.

12.8 Weather Forecasting

Weather forecasting plays a major role in predicting the weather in the near future. It is difficult to predict the weather that could prevail in the future. A thorough understanding of meteorology is necessary for the forecast familiarity with the local weather helps to correlate the existing weather conditions and in forecast the future weather. The prediction of weather for a given place, is normaly for a period of time, for instance is for 24 to 48 hours.

The methods used for weather forecasting are conventional, synoptic, numerical weather prediction. Conventional interprets the trend of weather system. Numerical solutions, global circulation models, variation analysis for synoptic hours.

The weather forecast categories are now casting, short range, medium range long range and forecasting. Now casting gives the details of the current weather
