These sites have produced a large quantity of copper objects. They used copper objects such as flat axes, bangles, rings, antimony rods, knives, blades, socket-less axes, barbed and tanged arrow heads, choppers and chisels.

Ochre Coloured Pottery Ware Culture

Ochre Coloured Pottery Ware culture is found in northern India dating to the Chalcolithic period. The OCP pottery has red slip and appears ochre in colour (the ochre colour comes off when the pottery is touched) and hence, it is called Ochre Coloured Pottery. It has black painted designs. The OCP comes in the form of jars, storage jars, bowls, and basins.

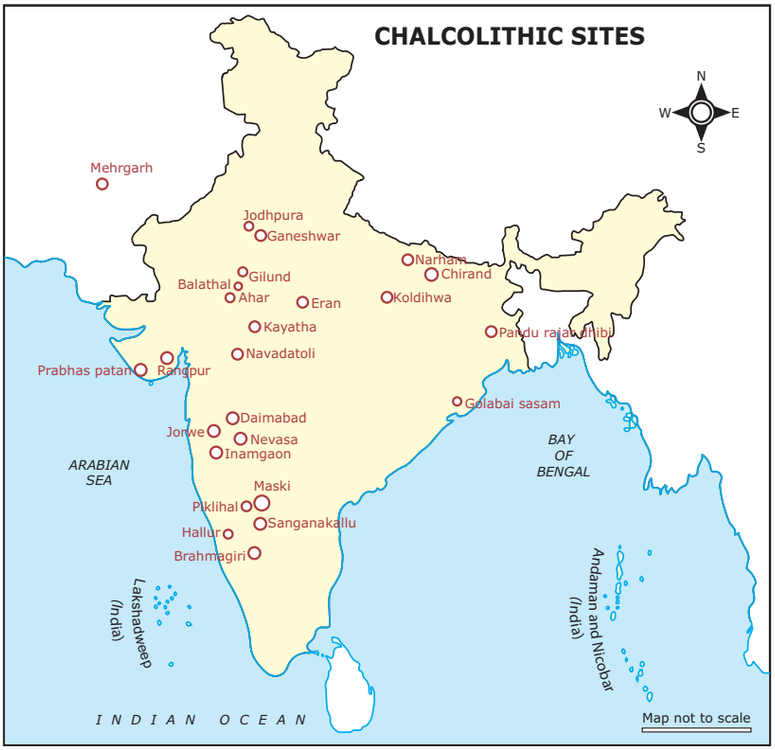

The OCP culture dates to 2600- 1200 BCE and is found in the Indo-Gangetic plain and may have had some associations with early Vedic culture. The OCP culture is seen as an impoverished Harappan culture and some scholars see it as unrelated to the Harappan culture. The OCP sites produced copper figures and objects and therefore it is also known as "copper hoard culture." It is a rural culture and has evidence of the cultivation of rice, barley, and legumes. They also had pastoralism with evidence of cattle, sheep, goats, pigs, horses, and dogs. The villages had wattle-and-daub houses. They used copper and terracotta ornaments. Animal figurines have also been found.

Ochre Coloured Potsherds

Chalcolithic Cultures of South India

The southern part of India has not produced cultural evidence of a full-fledged chalcolithic culture. Perforated and spouted vessels have been found in some sites. Copper bronze tools like chisels and flat axes occur at these sites. Stone tools continued to be used in this area. Black on red ware pottery is found. These people survived through animal rearing and agriculture. Millets, pulses and horse gram were cultivated, and fruits, leaves and tubers were collected.
