commerce. Despite the Mongol conquests of the western borderlands, in Irfan Habib's view, India's external trade, both overland and oceanic, grew considerably during this period.

Trade and Urbanization

The establishment of the Delhi Sultanate revived internal trade, stimulated by the insatiable demand for luxury goods by the sultans and nobles. Gold coins, rarely issued in India after the collapse of the Gupta Empire, began to appear once again, indicating the revival of Indian economy. However, there is no evidence of the existence of trade guilds, which had played a crucial role in the economy in the classical age. The Sultanate was driven by an urban economy encompassing many important towns and cities. Delhi, Lahore, Multan, Kara, Lakhnauti, Anhilwara, Cambay and Daulatabad were the important cities that thrived on the mercantile activities of Jain Marwaris, Hindu Multanis and Muslim Bohras, Khurasanis, Afghans and Iranians. The import–export trade flourished well both through overland and overseas. While the Gujaratis and Tamils dominated the sea trade, the Hindu Multanis and Muslim Khurasanis, Afghans and Iranians dominated the overland trade with Central Asia.

Industrial Expertise

Paper-making technology evolved by the Chinese and learnt by the Arabs was introduced in India during the rule of the Delhi Sultans. The spinning wheel invented by the Chinese came to India through Iran in the fourteenth century and enabled the spinner to increase her output some six-fold and enlarged yarn production greatly. The subsequent introduction of treadles in the loom similarly helped speed-up weaving. Sericulture centre was established in Bengal by the fifteenth century. Building activity attained a new scale by the large use of brick and mortar, and by the adoption of the vaulting techniques.

Education

Certain traditions of education were now implanted from the Islamic World. At the base was the *maktab*, where a schoolmaster taught children to read and write. At a higher level, important texts in various subjects were read by individual pupils with particular scholars who gave instruction (*dars*) in them. A more institutionalised form of higher education, the *madrasa,* became widely established in Central Asia and Iran in the eleventh century, and from there it spread to other Islamic countries. Usually the *madrasa* had a building, where instruction was given by individual teachers. Often there was a provision of some cells for resident students, a library and a mosque. Firoz Tugluq built a large *madrasa* at Delhi whose splendid building still stands. From Barani's description it would seem that teaching here was mainly confined to "Quran-commentary, the Prophet's sayings and the Muslim Law (*fiqh)*." It is said that Sikander Lodi(1489–1517) appointed teachers in *maktabs* and *madrasas* in various cities throughout his dominions, presumably making provision for them through land or cash grants.

Historiography

In addition to secular sciences that came with Arabic and Persian learning to India, one more notable addition was systematic historiography. The collection of witnesses' narratives and documents that the *Chachnama* (thirteenth-century Persian translation of a ninth-century Arabic original), in its account of the Arab conquest of Sind, represents advancement in historical research, notwithstanding the absence of coherence and logical order of latter-day historiography like Minhaj Siraj's *Tabaqat-i Nasiri*, written at Delhi c. 1260.

Sufism

In the thirteenth and fourteenth centuries, two most influential orders emerged among the *sufis*: the Suhrawardi, centred at Multan, and the Chisti at Delhi and other places. The most famous Chishti Saint, Shaik Nizamuddin offered a classical exposition of Sufism of pre-pantheistic phase in the conversations (1307–1322).Sufism began to turn pantheistic only when the ideas of Ibn al-Arabi (died 1240)
