Table A1.1 Systematic developments in physics over centuries (*Cont*)	
▪ Work on magnetism	William Gilbert (Around 1600)
▪ Behavior of gases	Robert Boyle (1627- 1691)& Robert Hooke
▪ Fluid dynamics - Bernoulli's theorem (1734)	Daniel Bernoulli(1700- 1782)
▪ Early ideas of kinetic theory of gases	Daniel Bernoulli (1700 - 1782)
▪ Study of spring motion(Hooke's law)	Robert Hooke
▪ Derivation of frequency of vibration in strings(1714)	Taylor
▪ Reformulation of Newtonian mechanics using Energy approach (Lagrangian mechanics)	De Alembert, Lagrange
▪ Invention of steam engine(1781)-	James Watt
▪ Force between charges (Coulomb's law)	Coulomb
▪ 19th century development	
▪ Early ideas of Thermodynamics(1840s)	James Joule, Carnot
▪ Caloric theory	
▪ Laws of thermodynamics(1850s)	Kelvin, Clausius
▪ Behavior of gases, velocity and speed(1860s)	James Clark Maxwell
▪ Foundation of statistical mechanics and entropy formula (around 1870s)	Boltzmann
▪ Wave nature of light- Experiments	Young and Fresnel
▪ Behavior of electric charges	
▪ Magnetic effect of electric current(1820s)	Oersted
▪ Force between two parallel currents	Ampere
▪ Principle of Least action, Hamilton mechanics (1821)	William Hamilton
▪ Electric powered motor, electricity demonstration	Micheal Faraday
▪ Theory of electromagnetism(1873)- Bridge between electricity and magnetism	James Clerk Maxwell
▪ Maxwell equations –Paved way to modern technology	Tesla
▪ Alternating current
