```
int main ( )
{
int a =5,b=10;
if(a>b)
{
        int t;          // local to this if block - Local variable
        t=a+20;
 }
cout<<t;
add(a);
cout<<m;
cout<<"\nThe File Variable = "<<file_var;
return(0);
}
```

Error
In function 'int main()':
[Error] 't' was not declared in main()

On compilation the Program 11.28, the compiler prompts an error message: The variable **t** is not accessible. Because the life time of a local variable is the life time of a block in its state of execution.

[Error] 'm' was not declared in this scope

The variable **m i**s not accessible. Because the life time of the function scope variable is the life time of a block in its state of execution.

11.10.5 Class Scope:

- A class is a new way of creating and implementing a user defined data type. Classes provide a method for packing together data of different types.
- Data members are the data variables that represent the features or properties of a class.

class student
{
private :
int mark1, mark2, total;
};
	The class student contains mark1, mark2 and total are data variables. Its scope is within the class student only.

Note: The class scope will be discussed later in chapter **"Classes and Object"**.
