

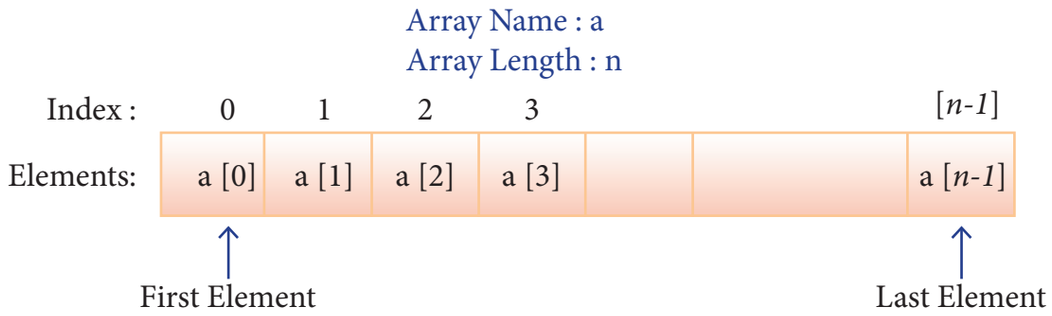

Figure 12.2

Syntax

Array declaration is:

char array_name[size];

In the above declaration, the size of the array must be an unsigned integer value.

For example,

char country[6];

Here, the array reserves 6 bytes of memory for storing a sequence of characters. The length of the string cannot be more than 5 characters and one location is reserved for the null character at the end.

//Program to demonstrate a character array.

```
#include <iostream>
using namespace std;
int main()
 {
        char country[6];
        cout<< "Enter the name of the country: ";
        cin>>country;
        cout<<" The name of the country is "<<country;
}
```

OUTPUT

```
Enter country the name: INDIA
The country name is INDIA
```

Initialization

The character array can be initialized at the time of its declaration. The syntax is shown below:

char array_name[size]={ list of characters separated by comma or a string } ;

For example,

char country[6]="INDIA";

In the above example, the text "INDIA" has 5 letters which is assigned as initial value to array country. The text is enclosed within double quotes. The memory representation is shown in Figure 12.3
