class derived_class_name :visibility_mode base_class_name

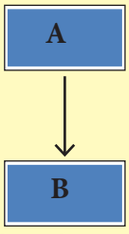
{ // members of derivedclass };

The following are some of the examples for different forms of inheritance

16.4.1 Single Inheritance

Illustration 16.1 Single inheritance

```
# include <iostream>
using namespace std;
class student          //base class
{
private :
char name[20];
int rno;
public:
void acceptname()
{
cout<<"\n Enter roll no and name .. ";
cin>>rno>>name;
}
void displayname()
{
cout<<"\n Roll no :-"<<rno;
cout<<"\n Name :-"<<name<<endl;
}
};
class exam : public student          //derived class with single base class
 {
public:
          int  mark1, mark2 ,mark3,mark4,mark5,mark6,total;
  void acceptmark()
  {
    cout<<"\n Enter lang,eng,phy,che,csc,mat marks.. ";
    cin>>mark1>>mark2>>mark3>>mark4>>mark5>>mark6;
}
void displaymark()
{
cout<<"\n\t\t Marks Obtained ";
cout<<"\n Language.. "<<mark1;
cout<<"\n English .. "<<mark2;
cout<<"\n Physics .. "<<mark3;
cout<<"\n Chemistry.. "<<mark4;
cout<<"\n Comp.sci.. "<<mark5;
cout<<"\n Maths ..   "<<mark6;
cout<<"\n Total ..   "<<mark1+mark2+mark3+mark4+mark5+mark6;
}
 };
int main()
```



Single inheritance
