GLOSSARY

TYR8O

WORD	*MEANING*
Paradigm	Organizing principle of a program.
Abstraction	Abstraction refers to showing only the essential features without revealing background details
Modularity	Designing a system that is divided into a set of functional units (named modules) that can be composed into a larger application.
Base class	A class whose properties are inherited by other newly created classes .Also called as parent class
Derived class	A class which inherits the properties of the base class. Also called as child class or subclass.
Class	Class represents a group of similar objects that share common properties
Object	Identifiable entity with some characteristics and behaviour
Encapsulation	Mechanism by which the data and function sare bound together into a single unit
Inheritance	Process of creating new classes called derived classes, from the existing or base classes.
Signature	Number of argument and type of argument
Polymorphism	many forms
Default argument	Initializing the argument with a value
Base Class:	A class from which another class inherits (Also called Super class or parent class)
Derived Class:	A class inheriting properties from another class. (Also called Sub class)
Inheritance	The process of one class to inherit properties from another class
Inheritance Hierarchy (Inheritance Path):	The chain depicting relationship between a base class and the derived class (Also called Derivation Hierarchy)
Visibility mode	The public, private or protected specifier that controls the visibility and availability of a member in a class
Vulnerability	The possibility of being attacked or harmed.
Ethics	Moral principles that govern a person's behaviour or the conducting of an activity.
