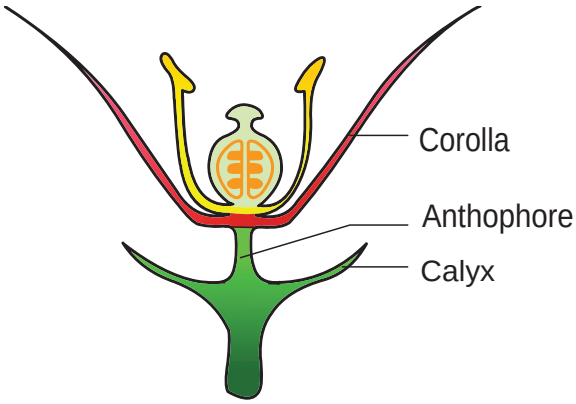

Figure 4.36: (a) Anthophore

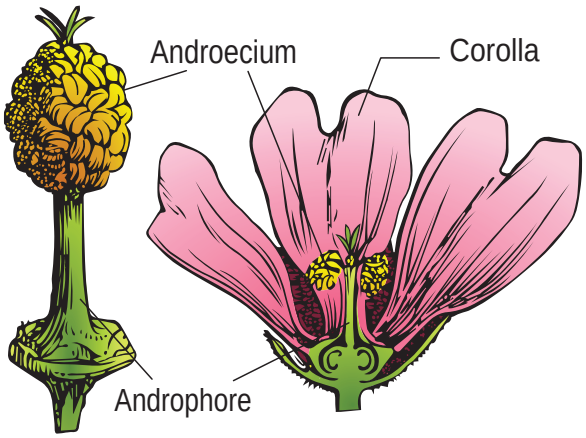

Figure 4.36: (b) Androphore

4.5.5 Extension of the condensed internode of the receptacle

1. Anthophore:The internodal elongation between calyx and corolla. Example: caryophyllaceae (*Silene conoidea*)

2. Androphore: The internodal elongation between the corolla and androecium. Example: *Grewia*.

3. Gynophore: The internodal elongation between androecium and gynoecium. Example: *Capparis*.

Figure 4.36: (c) Gynophore

Saffron flower stigma is costly. One gram of saffron is around Rs.300. In traditional texts ascribe a few medicinal properties to saffron stigma.It is also used as a flavoring substance.

4. Gynandrophore or **Androgynophor**e: The unified internodal elongation between corolla and androecium and androecium and gynoecium. Example: *Gynandropsis*.

Figure 4.36: (d) Androgynophore

4.5.6 Ovary position

Hypanthium: (staminal disk); a fleshy, elevated often nectariferous cup like thalamus.

The position or attachment of ovary relative to the other floral parts. It may be classified into

1. **Superior ovary:** It is the ovary with the sepals, petals and stamens attached at the base of the ovary.

2. **Inferior ovary:** It is the ovary with the sepals, petals and stamens attached at the apex of the ovary.

3. **Half-inferior ovary:** It is the ovary with the sepals, petals and stamens or hypanthium attached near the middle of the ovary.
