www.tntextbooks.in

Heterospory	Production of spores of different sizes: megaspores and microspores
Karyogamy	Fusion of nucleus
Karyotype	Number, sizes, and shapes of the entire set of metaphase chromosomes of a eukaryotic cell.
Km	A parameter that describes the affinity of an enzyme for its substrate and equals the substrate concentration that yields the half-maximal reaction rate;
Leptosporangiate	Sporangium formed from a single initial
Merosity	Number of parts per whorls
Microgreens	Young vegetable greens add flavour in culinary
Monograph	Complete account of a taxon of any rank
Monosulcate	Pollen grain with single furrow or pores
Mycobank	Online database documenting new mycological names
Nucleoid	Genetic material of bacterium
Oogamy	Fusion of morphologically and physiologically dissimilar gametes
Parthenocarphy	Fruit developed without fertilization
Pendulous	Hanging downward loosely or freely (like catkin)
Petrifaction	A process of fossil formation through infiltration of minerals over a long period
pH	A measure of the acidity or alkalinity of a solution defined as the negative logarithm of the hydrogen ion concentration in moles per liter
Phylogeny	Evolution of group of organisms
Pistillode	Sterile pistil
Plasmogamy	Fusion of cytoplasm
Pluriocular	An ovary with two or more locus
Prophage	The integrated phage DNA with host DNA
Protologue	Set of information associated with the scientific name of a taxon at its first valid publication containing the entire original material regarding the taxon
Rachilla	Central axis of a spikelet
Sporophyte	Diploid plant body
Teloemorph	Sexual or perfect state of the fungi
Thallospores	Asedual spores formed due to the fragmentation of hyphae
Triplicate	Pollen grain with three furrows or pores
X-Ray crystallography	Most commonly used technique for determining the three-dimensional structure of macromolecules (particularly proteins and nucleic acids) by passing x-rays
Zoospore	Motile, asexual spores
Zygospore	Thick walled diploid resting spores
