Types of vascular Bundles

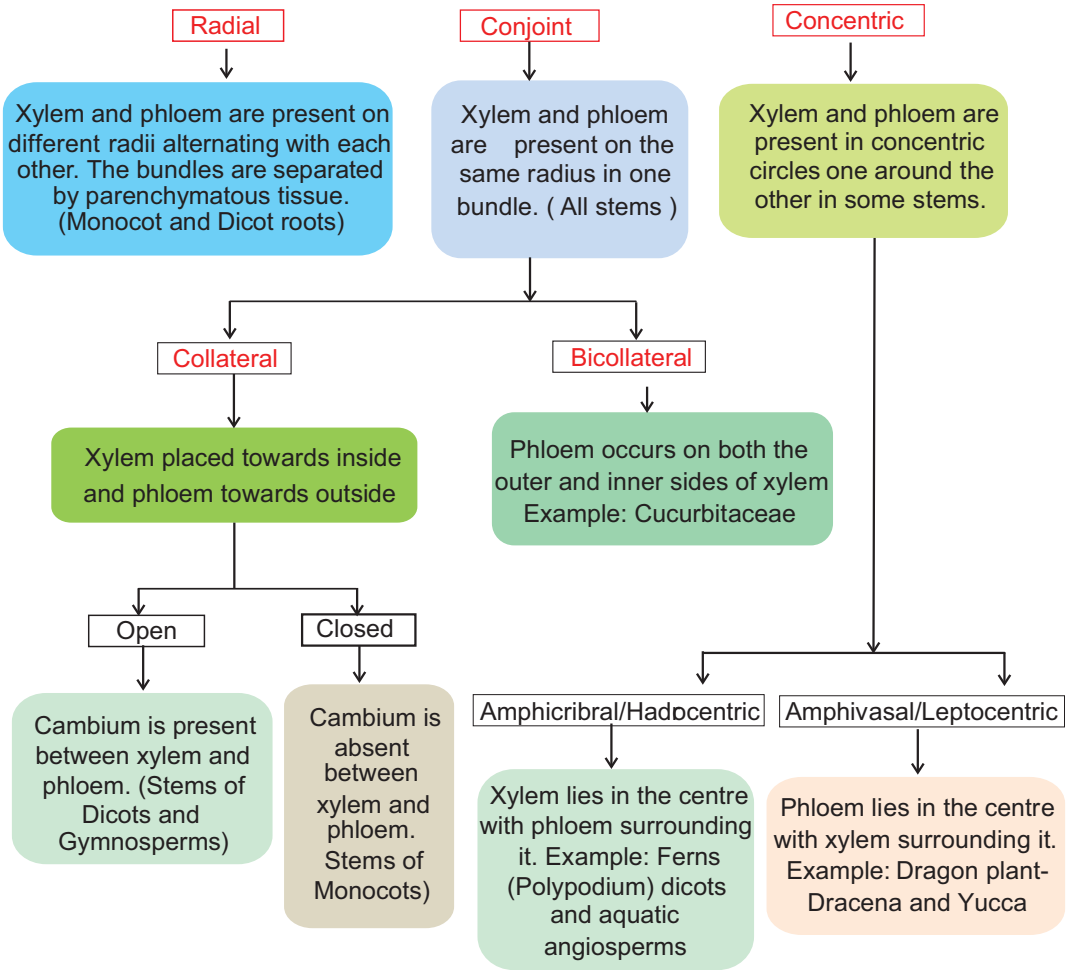

Table 9.3: Comparison of vascular tissues

Proto xylem	**Meta xylem**
• First formed primary xylem • Found in developing organs • Elements relatively smaller in size	• Later formed primary xylem • Found in developed primary organs • Elements relatively larger in size
Proto phloem	**Meta phloem**
• First formed primary phloem • Found in developing organs • Elements relatively smaller in size	• Later formed primary phloem • Found in developed primary organs • Elements relatively larger in size
Primary xylem	**Secondary xylem**
• The primary xylem is derived from the procambium of the apical meristem	• The secondary xylem is derived from the vascular cambium which is a lateral meristem
Primary phloem	**Secondary phloem**
• The primary phloem is derived from the procambium of the apical meristem	• The secondary phloem is derived from the vascular cambium, which is a lateral meristem
